***Allowable Subject Matter***

Claims 1-10 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art neither shows nor suggests a multiprojection system having all of the elements of claim 1 and in particular "image capturing means comprising optical means having a plurality of filter characteristics corresponding to a plurality of basic colors constituting the color image projected by the projectors," in combination with "calculating means for calculating offset correction data for each of the basic colors on the basis of a luminance distribution of offset light of each of the basic colors obtained by allowing the image capturing means to capture a black level image projected by the projectors."

Method Claim 9 is allowed for the same reasons, in particular, the prior art of record neither shows nor suggests the following steps: "separating the black level image into images of basic colors constituting the color image using optical means having a plurality of filter characteristics corresponding to the basic colors;" and "calculating offset correction data for each of the basic colors on the basis of a luminance distribution of offset light of each of the basic colors obtained by capturing each of the separated images of the basic colors."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

**Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Mayer et al. U.S. Patent 6,760,075 B2 teaches a method and apparatus for seamless integration of multiple video projectors.

Surati et al. U.S. Patent 6,456,339 B1 teaches a super-resolution display.
